

QA Report: Delivery estimate is one day early for evening orders

Report ID: QA-2026-117
Component: Checkout / delivery estimate
Severity: Major (customer-facing promise is wrong)
Environment: staging, Chrome 141 on macOS, device clock set to Asia/Kolkata (IST)
Tester: QA team, Bengaluru

Summary

The estimated delivery date shown in the cart and stored on the order is one day too early for orders placed at or after 8:00 PM IST. Our dispatch cutoff is 8 PM IST: anything ordered after that is dispatched the next day, so the promise should move out by a day. It does not.

Business rule under test

- Orders placed before 20:00 IST are dispatched the same day.
- Orders placed at or after 20:00 IST are dispatched the next day.
- Transit takes 3 days; Sundays are not delivery days.

Steps to reproduce

1. Set the device clock (or the service clock in the test harness) to ****Tuesday 10 March 2026, 21:00 IST**** (15:30 UTC).
2. Add any product to the cart, e.g. Ceramic Coffee Mug.
3. Read the "Estimated delivery" line under the cart totals.
4. Place the order and open "Your orders"; read "arrives ...".

Expected result

Dispatch Wednesday 11 March, delivery Sat, 14 Mar (2026-03-14).

Actual result

Cart and order both show Fri, 13 Mar (2026-03-13) - the same date as a morning order.

Additional observations

Order time (IST)	UTC equivalent	Expected	Actual	Result
Tue 10 Mar, 10:00	04:30	Fri 13 Mar	Fri 13 Mar	Pass
Tue 10 Mar, 19:55	14:25	Fri 13 Mar	Fri 13 Mar	Pass
Tue 10 Mar, 20:05	14:35	Sat 14 Mar	Fri 13 Mar	FAIL
Tue 10 Mar, 21:00	15:30	Sat 14 Mar	Fri 13 Mar	FAIL
Tue 10 Mar, 23:45	18:15	Sat 14 Mar	Fri 13 Mar	FAIL
Thu 12 Mar, 21:30	16:00	Tue 17 Mar	Mon 16 Mar	FAIL

- Every failing case is at or after 20:00 IST; the estimate is always exactly one day early.
- Morning and afternoon orders are correct, including orders just after midnight IST.
- Reproduced on two machines, one with the OS timezone set to UTC and one set to IST, so it does not depend on the browser's local timezone.
- This worked in the previous release that QA signed off; it looks like a regression.
